FOOD INDUSTRY celduc® relais' solutions

celduc® Solid State Relays (SSRs) are widely used in the food industry as a replacement of electromechanical relays (EMR) because of their ability to work in harsh environments (dust, gas, shocks and vibrations) without operating problems. Fully electronic, there are no moving parts inside the SSRs, so they have higher life-time expectancy. Furthermore, their semiconductor based design makes them environmentally safe to be used in most applications including : ovens, fast-food equipment, coffee machines, ...

In the food industry, there are also numerous applications for our magnetic proximity sensors : if you are looking for position, presence or level detection, we are able to offer a solution.

celduc relais' solutions are listed in a new brochure available in [english](#), in [french](#) and in [chinese](#).

celduc products will be presented at the following exhibitions :

ELECTRONICA 2018

Munich - GERMANY

Nov. 13th to the 16th 2018
